

**LISTING OF CLAIMS**

1-12. (cancelled).

13. (previously presented) Amphipathic block copolymer particles prepared by:

polymerizing a first unsaturated monomer containing a hydrophilic moiety through an ATRP process to form a first polymer, and

copolymerizing a second unsaturated monomer containing a hydrophobic moiety with the first polymer in an emulsion to form amphipathic block copolymer particles having a size range of 50-500 nm, and a polydispersity index in the range of 1-1.2.

14. (previously presented) The amphipathic polymer particles of claim 13, further comprising a polymerizable dye moiety, polymerized with the first unsaturated monomer through the ATRP process.

15. (previously presented) The amphipathic polymer particles of claim 13, further comprising a cross linker copolymerized with the second unsaturated monomer and the first polymer in the emulsion.

16. (previously presented) The amphipathic polymer particles of claim 13, wherein the content of the hydrophobic moiety is in the range of 30% to 99% by weight, the content of the hydrophilic moiety is in the range of 1% to 60% by weight.

17-23. (cancelled).
